## **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Tamera Fair on 06 December 2004.

The application has been amended as follows:

In the Specification:

On page 3 Line 15, before "boron" insert - - hexagonal - -

In the Claims:

Claim 1 Line 5, before "boron" insert - - hexagonal - -

The following is an examiner's statement of reasons for allowance:

None of the prior art made of record discloses a method of cleaning teeth comprising a step of providing a brush that comprises bristles that are prepared from a composition comprising a thermoplastic polymeric resin in admixture with a slip agent to improve cleaning efficacy of the bristles of the brush contacting said teeth, wherein the slip agent is one or more members of the group consisting of a fluorinated olefin polymer, hexagonal boron nitride, molybdenum disulfide, and fullerine.

USPN 6,270,895 discloses a method of providing a toothbrush having a cubic boron nitride. In the article titled "Boron Nitride – A Review" (by, Donald Lelonis) there

Application/Control Number: 10/805,868

Art Unit: 1744

is a definition and comparison between a hexagonal and cubic boron nitride and it is disclosed that the "hexagonal" type of boron nitride is soft and lubricating wherein the "cubic" form of boron nitride is of a hard and abrasive nature (see Table 1). Further support of these two forms of boron nitride are cited, they are titled "Boron Nitride" and "Cubic Boron Nitride." From the Applicant's specification and definition of a slip agent as being "...any substance that, when added to a polymer to form a composition from which a filament is produced, will reduce the coefficient of friction experienced by that filament in contact with a tooth when the filament is used as a bristle in a toothbrush," it has been made clear that the boron nitride form that the Applicant refers to is the hexagonal boron nitride which has lubricating non-abrasive characteristics. Also, by adding the term "hexagonal" before boron nitride in the claims and in the specification, it is not considered new matter because it is a natural property and the "hexagonal" boron nitride is the form of boron nitride that has slip characteristics.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura C Cole whose telephone number is (571) 272-1272. The examiner can normally be reached on Monday-Thursday, 7:30am - 5pm, alternating Fridays.

Application/Control Number: 10/805,868

Art Unit: 1744
